CUSTOMER BENEFITS

- Information collection management and intelligence dissemination
- Accurate up-dating and traceability
- Enhanced interoperability
- High availability and performance optimisation

INTELLIGENCE SYSTEMS

Multi-source intelligence fusion and dissemination system
Decision-makers need access to actionable intelligence, in peace or crisis-time, in order to take the right measures accordingly. Meanwhile, today’s operations are conducted in joint and allied context with interoperability and flexibility constraints. Therefore, an Intelligence system should handle the planning, collection, analysis and report generation in order to evaluate the intelligence picture for the use of operations commander.

**CUSTOMER NEEDS**
A flexible system with dedicated services for the use of analysts and members of the intelligence community.

The system shall be:
- Interoperable (joint and/or allied dimension)
- Collaborative work enabler
- Mastering all the different steps of the intelligence cycle process

**THALES ANSWER**
Comm@nder Intel is supplying a set of services in support of analysts and intelligence cells at all levels of command.

The system proposes a suite of dedicated applications (Knowledge database, CCIRM, data-mining applications, analysis tools, geographic viewer...).

Coping with interoperability constraints, Comm@nder Intel delivers the right tools to optimize the steps of the intelligence cycle, from information collection to intelligence dissemination.

**MAIN FUNCTIONALITIES**
- Information sharing between different sites and organizations (replication of the validated data, documents and their index),
- Management of RFI (Request For Information),
- CCIRM functionalities (Collection Coordination Intelligence Requirements Management),
- Electronic Document Management (EDM),
- Management of tactical data (units, organizations, persons, sites, equipments, events),
- Analysis data display (i.e. relational diagrams, temporal banners, organization charts...),
- Semantic search engine,
- Text, image and video management,
- Interoperability with heterogeneous C2 via Web services and messaging,
- Virtual intelligence repository (Coalition Shared Database),
- GIS and messaging services.
