

THALES CYBER AND CONSULTING

GDPR Compliance

KEY BENEFITS

- **EXPERT DRIVEN:** Our qualified privacy consultants will lead you through all stages of the process providing expert knowledge and insight throughout, and ensuring a clear picture of what needs to be done to achieve compliance is compiled
- **COST EFFECTIVE AND TIMELY:** A short targeted work-package giving a value for money service providing you with the answers you need to put a programme of work in place to meet the GDPR requirements
- **RISK BASED:** Non compliances will be assessed in terms of their relative risk to both the data subject (“risks to the rights and freedoms of data subjects”) and to the organisation, such that subsequent improvement activities and work can be planned and prioritised in accordance with these risks
- **ACTIONABLE:** A clear and concise report will present findings and a road map that can be used to drive subsequent compliance improvement activities

INTRODUCTION

GDPR – which is described in more than 250 pages in the Official Journal of the European Union, April 2016 - governs every aspect of how personal data is captured, stored, processed, protected, used, transferred and how long it can be retained for. Fines for non-compliance can be as high as €20 million or 4% of your annual global turnover. So if you haven't started your journey to compliance, the time to act is now.

INTRODUCING THALES GENERAL DATA PROTECTION REGULATION COMPLIANCE (GDPR)

Thales has developed a bespoke methodology for GDPR compliance. One of the most important challenges on your journey to compliance is the first one: working out how far away you are from compliance and what you need to do next.

Some requirements are more onerous (and carry greater penalties for noncompliance) than others. Very few organisations will be able to comply with GDPR without adopting new measures and controls. And some organisations will need a major overhaul of their data systems and policies. Fortunately, Thales has the skills and resources to help

your team understand the full implications for your particular enterprise and to achieve compliance by the time the regulation comes into effect.

OUR APPROACH

- **INFORM:** Thales will work with you to advise and educate on the key requirements of the GDPR and the potential impact it may have on your business
- **MODEL:** Using a variety of techniques from workshops, presentations, questionnaires, and individual interviews, Thales will generate a whole organisation data model
- **ASSESS:** Thales will perform a compliance assessment against the requirements of the GDPR
- **REPORT:** A final report will describe the findings of the data modelling and gap analysis activities. A high level road map will be presented which will highlight where technical and organisation measures need to be either updated or improved in order to comply with the GDPR

THE PRINCIPLES OF GDPR

- **THE PRINCIPLE OF ACCOUNTABILITY:** The principle of accountability places an on-going responsibility on Data Controllers
- **THE PRINCIPLE OF TRANSPARENCY:** The principle of transparency requires that data controllers must ensure that communications with data subjects are conducted in a manner which is concise, easily accessible and easy to understand
- **STRENGTHENED DATA SUBJECT RIGHTS:** The right to be forgotten, the right to object to processing and the right to data portability (– the right to take your data with you, even if this is to a competitor)
- **THE RULES FOR GAINING CONSENT HAVE BEEN TIGHTENED:** Organisations will now have to make consent a clear and positive action

MARKETS AND CUSTOMERS

The General Data Protection Regulation (GDPR) comes in to force on 25th May 2018, placing new obligations on anyone who collects, stores or processes the personal data of EU residents - regardless of geographical location.

With such a complex regulation, achieving compliance is likely to be a lengthy and complicated business. This will not be a one-step process. Compliance with GDPR will be an on-going activity which must adapt as your organisation evolves. Thales can help.

WHY THALES?

Our data security consultants have direct personal experience of risk and compliance activities in nuclear, rail, aviation, defence, government and automotive markets around the world, and have tackled large and small projects.

Your compliance team will be supported by Thales's extensive resources and expertise in information assurance and security, risk assessment, systems engineering, through-life management and training. Plus, you'll have access to our specialists in human factors and business change, who can be deployed as required.
