Thales to modernize Brescia Metro

- Brescia is a city in the region of Lombardy in Northern Italy. With a population of more than 200,000, it is the second largest city in the region and the fourth of northwest Italy. The city is the administrative capital of the Province of Brescia, one of the largest in Italy, with over 1,200,000 inhabitants.
- The Brescia Metro covers 17 stations plus 1 depot, 14 kilometers of route, with a fleet of 18 trains and serves the urban area by connecting the capital from north to south for more than 50,000 daily passengers.
- This new contract includes train to ground communication, video surveillance and security systems.
- The level of passenger safety will be improved thanks to the new broadband data connection system along the metro route and the "real-time" transmission of images from CCTV cameras.

Thales’ history with Brescia Metro goes a long way. The collaboration between Brescia Infrastructure Srl and Thales started in 2004. Thales brought its expertise in the maintenance of the systems to accompany the technological evolution of the infrastructure, ensuring an ever-increasing level of safety for passengers.

This long-term partnership has allowed Thales to meet additional needs expressed by the owner of the infrastructure and offer specific solutions: the existing architecture has been optimized to minimize the number of access points, while reducing energy consumption at the same time, and thus the environmental impact of maintenance activities.

The new contract recently signed with Thales to modernize Brescia Metro concerns train-to-ground broadband data communication solution. It includes more specifically the following
Thales technologies: integrated CCTV encoder for digitizing analog video signals; a Wi-Fi link connecting the train to the ground through on-board equipment and trackside access-points, and a dedicated data network to connect the Wi-Fi access-point to the Operations Control Center. Thales also provides in the Control Center, the software platform for video surveillance and diagnostics purposes.

The new broadband communication system installed across the metro network allows near real-time transmission of image data from on-board CCTV cameras to the Control Center, and the capacity to share this video content with other security operators. The level of passenger security on board trains will therefore dramatically improve.

The activities have already started and work completion is scheduled for February 2022.

The Brescia Metro covers 17 stations plus 1 depot, 14 kilometers of route, with a fleet of 18 trains and serves the urban area by connecting the capital from north to south. In service since 2013, this alternative mobility infrastructure has a strong impact on the road system of the city and represents a fundamental pillar of the urban plan for sustainable mobility in Brescia.

« Once again, Thales supports Brescia Infrastructure Srl in the technological evolution of its infrastructure, with the installation of an essential system to process on-board video feeds in real time, thus increasing passenger security. Thales confirms its role as a trusted partner in the sustainable digitalization transformation of its customers, a process aimed not only at achieving safe and intelligent mobility, but also at reducing the environmental impact of the city. » - Carlo Piacenza, Transportation Domain Director of Thales Italia

About Thales

Thales (Euronext Paris: HO) is a global leader in advanced technologies, investing in digital and “deep tech” innovations – connectivity, big data, artificial intelligence, cybersecurity and quantum computing – to build a confident future crucial for the development of our societies. The Group provides its customers – businesses, organisations and governments – in the defense, aeronautics, space, transport, and digital identity and security domains with solutions, services and products that help them fulfil their critical role, consideration for the individual being the driving force behind all decisions.

Thales has 81,000 employees in 68 countries. In 2020 the Group generated sales of €17 billion.
